

LAKES REGION GEOLOGY

with Jim Vernon

The landscape we see today in the Lakes Region has evolved over hundreds of millions of years. From ancient volcanoes, to inundation by shallow seas, to mile-thick sheets of glacial ice, to present day climate change, this part of New Hampshire has a long and dynamic history. Come listen to This program summarize some of the highlights of this long geologic history, with examples from the Lakes Region area.

Dr. Jim Vernon is a Senior Hydrogeologist with Nobis Engineering, specializing in groundwater sources for water supply, and has conducted studies, development, and protection in a variety of geologic settings.
