

# MOTUS Wildlife Tracking System

Join Carol Foss, NH Audubon's Senior Advisor for Science and Policy, for an introduction to the Motus Wildlife Tracking System.

Learn about a new research network that is revolutionizing the study of animal migration by tracking the movements of small birds, bats, and even dragonflies who have been fitted with tiny radio transmitters.

Carol will discuss how Motus works, what we're learning from it, efforts that are underway to expand the network in the Northeast and how you can get involved.

**Thursday, October 17, 2019 @ 7:00 p.m.**
